

Angular Hands-On 2 Report

Aim

To implement Angular data binding, lifecycle hooks, and parent-child communication in a Student Course Portal.

Work Done

- Implemented interpolation using portalName.
- Implemented property binding for enabling/disabling the Enroll button.
- Implemented event binding using onEnrollClick().
- Implemented two-way binding using [(ngModel)] with searchTerm.
- Implemented ngOnInit() and ngOnDestroy() lifecycle hooks.
- Created CourseCardComponent and implemented ngOnChanges().
- Used @Input() to receive course details.
- Used @Output() with EventEmitter to notify enrollment.
- Created a sample courses array in CourseListComponent.
- Displayed courses using *ngFor.
- Displayed the selected course ID after enrollment.
- Verified the application using ng serve.

Verification

- Search text updates live.
- Enroll button works correctly.
- Lifecycle messages appear in browser console.
- Selected course ID is displayed after clicking Enroll.

Result

Successfully completed Hands-On 2 by implementing Angular binding techniques, lifecycle hooks, and parent-child communication. The application executed successfully without errors.
