

Angular Hands-On 4 Report

Aim

To create an Enrollment Form using Angular Template-Driven Forms with validation and user-friendly form handling.

Work Done

- Generated the EnrollmentFormComponent using Angular CLI.
- Added the /enroll route in the routing configuration.
- Imported FormsModule into the application.
- Created the enrollment form using `[(ngModel)]` data binding.
- Applied built-in validators such as required, minlength, and email.
- Displayed validation error messages for invalid input fields.
- Disabled the Submit button until the form became valid.
- Displayed a success message after successful form submission.
- Added a Reset button to clear all form fields.

Verification

- Enrollment form loaded successfully.
- Validation messages appeared for invalid inputs.
- Submit button remained disabled until all required fields were valid.
- Success message was displayed after form submission.
- Reset button cleared all entered values.

Result

Hands-On 4 was completed successfully. A template-driven enrollment form with Angular validation, form submission, and reset functionality was implemented and tested successfully.
