

Angular Hands-On 1 – Student Course Portal

Objective: Install Angular CLI, create an Angular project, generate components, edit templates, run and build the application.

Commands Executed

- `npm install -g @angular/cli`
- `ng version`
- `ng new student-course-portal --routing --style=css`
- `cd student-course-portal`
- `ng serve`
- `ng g c components/header`
- `ng g c pages/home`
- `ng g c pages/course-list`
- `ng g c pages/student-profile`
- `ng build`

Files Explored

- `angular.json`
- `package.json`
- `tsconfig.json`
- `src/main.ts`
- `src/index.html`
- `src/app/app.ts`
- `src/app/app.html`
- `src/app/app.config.ts`
- `src/app/app.routes.ts`

Template Changes

1. Created Header component with navigation links (Home, Course List, Student Profile).
2. Updated Home component with welcome message and statistics.
3. Replaced `app.html` with `<app-header>` and `<router-outlet>`.
4. Configured routing to display the Home component.

Execution

Started the development server using `ng serve` and verified the application at `http://localhost:4200`.

Built the application using `ng build` to generate production files in the `dist` folder.

Result

The Angular Student Course Portal application was successfully created. The application displays a navigation header and a home page with student statistics. The project runs successfully without errors.
