

Angular Hands-On 6 Report

To implement Angular Services for managing course and enrollment data, share data between components using singleton services, and implement enroll/unenroll functionality.

Work Done

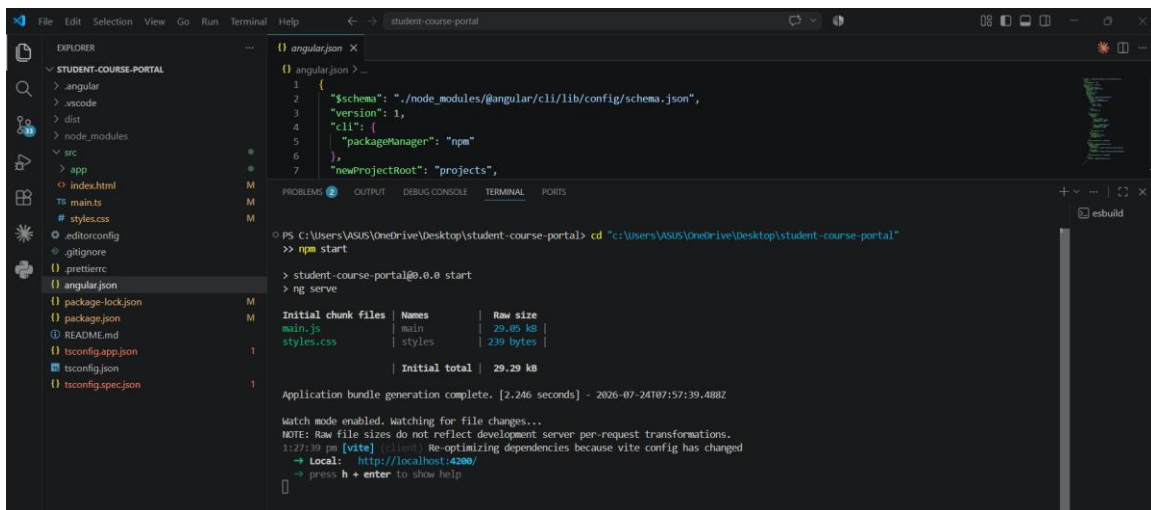

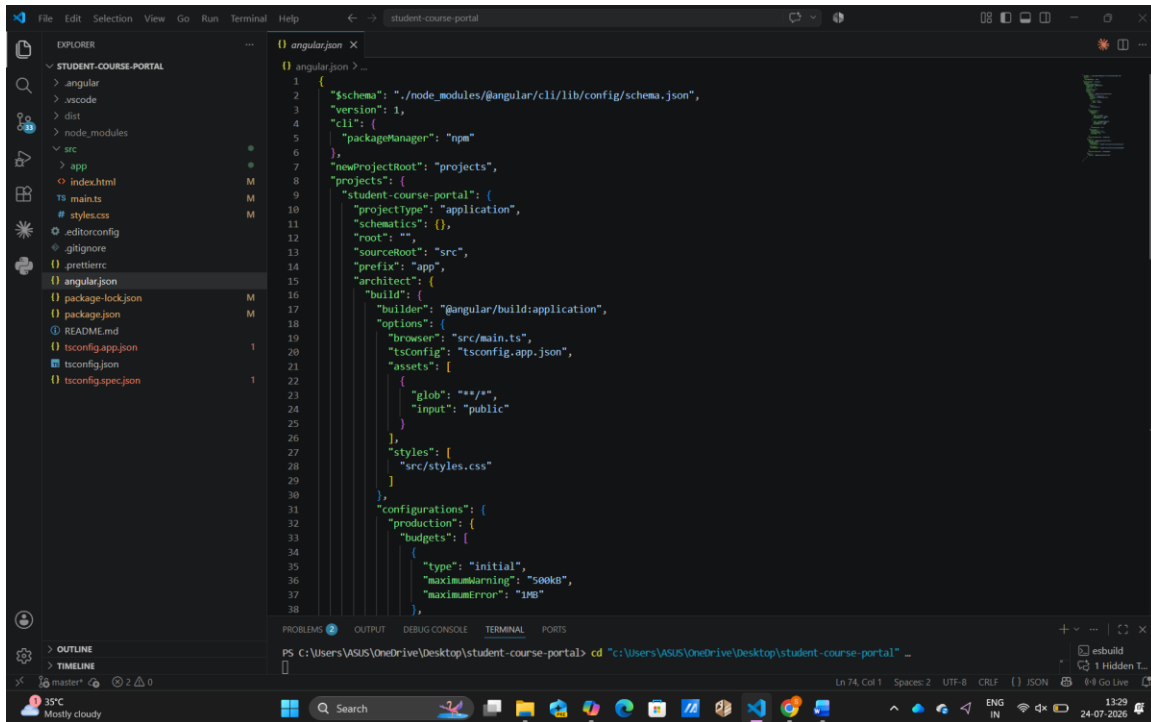

- Generated CourseService and EnrollmentService using Angular CLI.
- Configured both services with providedIn: 'root'.
- Injected CourseService into CourseListComponent and HomeComponent.
- Injected EnrollmentService into CourseCardComponent and StudentProfileComponent.
- Implemented an Enroll/Unenroll toggle button.
- Shared enrollment data across components using singleton services.

Verification

- Services were created successfully.
- CourseService supplied course data.
- EnrollmentService maintained shared enrollment state.
- Enroll/Unenroll worked correctly.
- Shared singleton behavior verified across components.

Result

Hands-On 6 was completed successfully. Angular services were implemented using singleton instances, enabling shared data management and successful enroll/unenroll functionality across components.

Courses

Math (M101)

Credits: 3

Status: passed

Unenroll

Physics (P102)

Credits: 4

Status: failed

Unenroll

Chemistry (C103)

Credits: 2

Status: pending
